The Kennedy Valve line of Rotating Disc gate valves has been utilized successfully since 1908 in water / wastewater treatment plants and water lines all over the United States. If you are looking for an extended life valve, this valve should be your choice for generations of service.

Kennedy Valve Rotating Disc gate valves clean themselves with every operation. Deposits are removed in travel, so nothing builds up on the seating surfaces that could cause leakage. Discs are free of pockets that could collect solids. The rotating action of the discs creates a different seating position each time the valve is closed. Uneven or excessive wear is prevented, so the sealing components remain smooth and operational years longer without maintenance or replacement. Since the discs rotate, they cannot foul on the body guides.

The superior Kennedy Valve design provides independent wedging and seating action for smoother valve opening and closing with less operating force. Discs are fully interchangeable and reversible, ensuring simple and inexpensive maintenance.

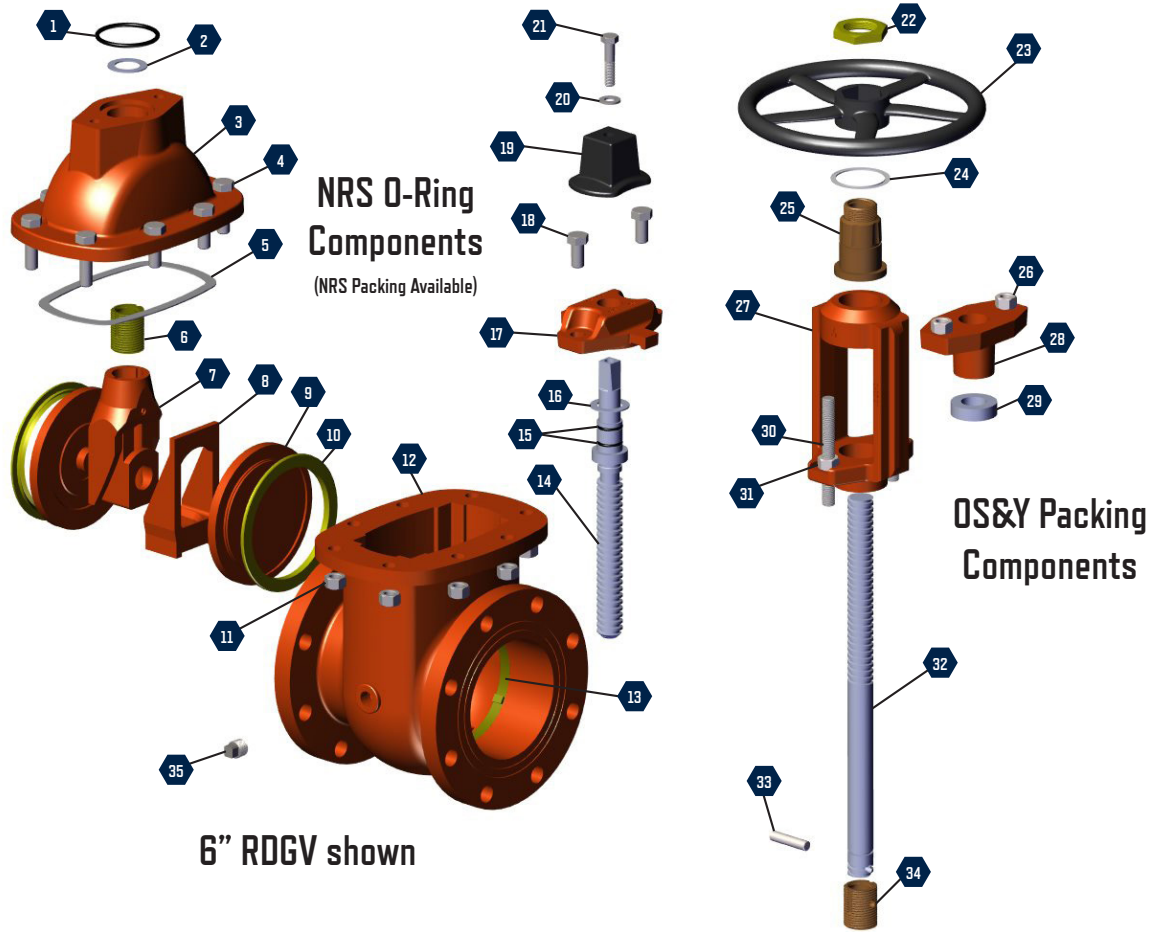

These advantages, along with uncompromising quality control, ensure that Kennedy Valve rotating disc gate valves will be ideal for water and wastewater applications. Kennedy Valve's unique design features make these valves fully capable of taking on services no other metal-seated gate valve can handle.

So for reliability, versatility, and long-life, specify Kennedy Valve rotating disc gate valves.

FEATURES

- Applications: clean water, raw water, waste water
- Complies with AWWA C-500
- NSF-61 approved
- Size range 3" through 108"
- Rated pressures up to 300 psi through 96" size valves.
- Full body ductile iron ASTM A536
- 304 Stainless Steel Stems standard (other materials available)
- Iron Body Bronze Mounting (IBBM)
- Bypasses optional 16" and larger
- Tracks and Scrapers standard on 14" and larger (for horizontal laying application)
- Disc-face tracking available for horizontal-flat installations 14" & up.
- Self-cleaning disc seats
- Non-Rising Stem (NRS) or Outside Screw and Yoke (OS&Y) configurations available
- Internal and external coating suitable for potable water and compliant with AWWA C550
- For vertical installations integrally cast flushing ports available

BYPASS VALVES

The main purpose of a Bypass Valve is to help with direct pressure on the disc seat. It is safer and helps prevent damaging the main valves seat when opening the bypass valve prior to the main valve. A bypass valve is offered in both vertical and horizontal positions, and in either packing, o-ring, NRS, or OS&Y. Bypass Valves are only offered on valves 16" and up.

3" Bypass Valve

TRACKS & SCRAPERS

Sediment Build up is a common problem in most valves due to a lack of being cycled often. Rotating Disc Valves get their name from the rotating disc and disc ring action that acts as a scraper across the seat rings that are in the body. The other components that help against sediment build up are the two scrapers that are attached to a modified upper wedge with an arm. The bronze scrapers ride on brass body and bonnet guides that are screwed into place while the valve is operating. In the horizontal position the scraper arm and scrapers also act as a guide and keep the disc assembly from putting extra stress on the stem while the valve is being opened. Tracks and scrapers are only offered in 14" and up valves in the horizontal position.

18" Scraper

FLUSHING PORTS

Another tool to help sediment build up in valves that aren't operated regularly is Flushing Ports. The purpose of Flushing Ports are to help clean out the extra waste that can settle in the bottom of the valve. Flushing Ports are offered in valves 14" and up and can be placed in the vertical valve position.

84" Flushing Port

ROTATING DISC GATE VALVES 3" - 108"

1. Manufacturers:
 - a. Kennedy Valve
 - b. At least 10 years waterworks or treatment plant experience.
2. Compliant with AWWA C500 (latest revision)
3. Materials:
 - a. Valve Body, Bonnet, Discs, Wedges: Ductile Iron ASTM-A536 (65/45/12).
 - b. Scraper, Stem Nut, Disc and Body Seat Rings: Bronze, B62/B505.
 - c. Ductile Iron Wedge Bearing Surfaces: Type 316 Stainless Steel.
 - d. Stem: 304 Stainless Steel ASTM-A276 (standard). (Consult factory for other stem materials.)
 - e. Valve Bolts and Nuts: Type 304 or 316 Stainless Steel ASTM F593/F594
4. Valve Construction -Rated Working Pressure:
 - a. Valves 3"–108": up to 250 psi (standard).
 - b. Customer to specify working and test pressure.
5. Stem Seals: OS&Y and NRS valves equipped with conventional packing (standard). NRS valves with redundant O-ring seals available (consult factory).
6. Two 360-degree ductile iron rotating discs, interchangeable and field replaceable without removal of valve body from pipeline. Discs and wedges free of any type pockets, linkages and pins
7. Self-adjusting bronze scrapers allow valve mounting in horizontal position or angle as specified from vertical or horizontal center lines.
8. Provide stems (NRS) with integral thrust collar (304 Stainless Steel, standard).
9. Where specified, valve body to have electric motor mounting pads.
10. Full port body design shall provide clear and unobstructed waterway for pigging of pipelines.
11. Horizontally installed valves shall be equipped with bronze tracks on the bottom side, providing smooth bearing surfaces for the discs to rotate freely throughout the entire travel.
12. Valve design to allow complete re-packing of valve stem under pressure when valve is in full open position.
13. Where specified, provide bypass valve bolted to bottom or side of main valve body. Provide valve type and material as specified.
14. Where specified, provide valve body with two integrally cast flushing ports for gate valve sized 14" and larger for valve in upright installation orientation. Drain plugs will not be accepted.
15. End connections, provide type as specified:
 - a. Flanged ASME B16.1 Class 125 or 250.
 - b. Mechanical Joint.
 - c. Mechanical Joint by Flange.
16. Geared Operators for all 14" and larger valves (as required).
 - a. Spur or bevel gearing as determined by valve application and orientation.
 - b. Buried valves shall have totally enclosed gear cases.
17. Factory test each valve per AWWA C-500 (latest revision).
18. Two part NSF-61 approved epoxy on the exterior and interior of valve.
